

Website Advertising Performance

Total spend and cost to acquire one client

Reporting period: 1 July to 8 September 2026
Source: Meta Ads Manager, all website campaigns
Prepared for: CEO and leadership team

THE TWO ANSWERS

Question 1. Total spend to promote the website

IDR 42,838,221

Across 67 days of delivery, 15,824,357 people reached, 124 website purchases.

Question 2. Cost to acquire one client (blended CAC)

IDR 345,470

All website spend divided by all purchases. The Sales campaigns alone acquire a client for IDR 110,651; see page 3.

How to read this report: page 2 gives the executive summary, page 3 explains why CAC has more than one correct value, pages 4 to 7 show where the money went and what it produced, pages 8 and 9 give the risks and the recommended next steps, page 10 lists the method and assumptions.

What leadership needs to know

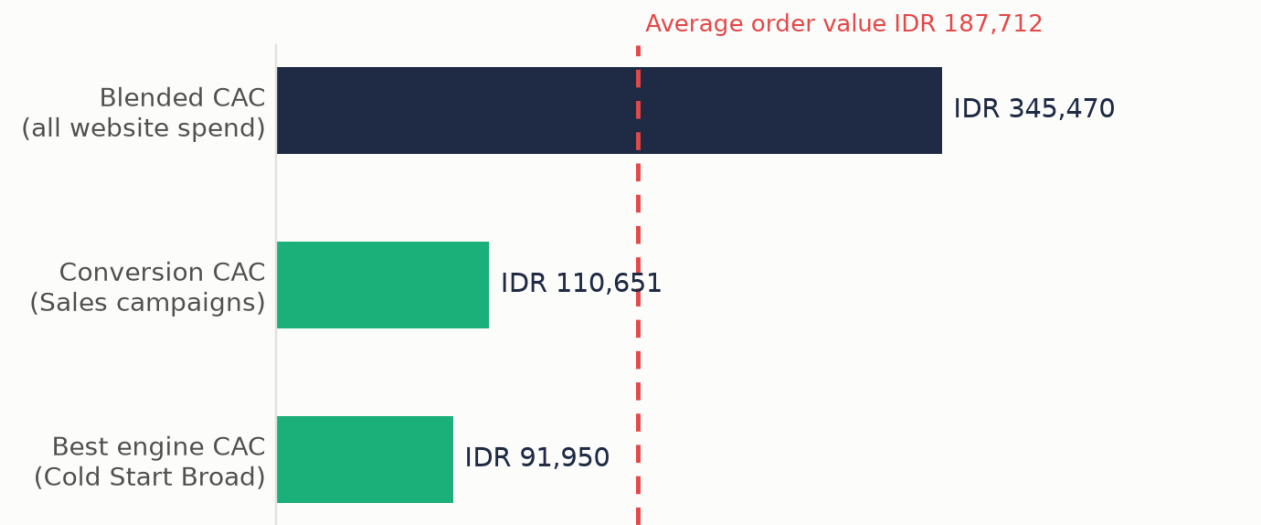

IDR 42.8M Total website promotion spend	IDR 345,470 Blended CAC (all spend per purchase)
IDR 110,651 Conversion CAC (Sales campaigns only)	IDR 187,712 Average order value
124 Website purchases (clients acquired)	IDR 23.3M Attributed purchase revenue
0.54x Blended ROAS (revenue per IDR 1 spent)	1.70x Sales campaign ROAS

Key messages

- **We spent IDR 42,838,221 on the website between 1 July and 8 September.** Only 31% of that budget went to campaigns built to produce purchases. The other 69% bought brand reach and website visits.
- **The fully loaded cost to acquire one client is IDR 345,470.** The campaigns whose job is to convert do it for IDR 110,651, and our best campaign does it for IDR 91,950. The difference is the price of building an audience.
- **Blended CAC is higher than the average order value of IDR 187,712.** On first purchase alone, the website programme returned IDR 0.54 for every IDR 1 spent. This is only acceptable if customers buy again.
- **Efficiency is improving month on month.** Blended CAC fell from IDR 461,699 in July to IDR 275,975 in early September as the Sales campaign matured.
- **The biggest leak is at checkout.** 1,837 shoppers added products to cart and 124 bought, a cart to purchase rate of 6.8%. Fixing this is cheaper than buying more traffic.

Why CAC has three correct answers

Our campaigns are set up as a funnel. Awareness campaigns pay for reach, Traffic campaigns pay for website visits, and only Sales campaigns are optimised by Meta to find buyers. Dividing all spend by purchases is honest but punishes the first two layers for a job they were not given. The three lenses below are all correct; they answer different questions.

Lens	What it answers	Spend	Purchases	CAC
1. Blended CAC	What did every rupiah of website promotion cost per purchase?	IDR 42.8M	124	IDR 345,470
2. Conversion CAC	What do the campaigns built to acquire buyers cost per purchase?	IDR 13.4M	121	IDR 110,651
3. Best engine CAC	What does our best acquisition campaign (Cold Start Broad) cost per purchase?	IDR 10.7M	116	IDR 91,950

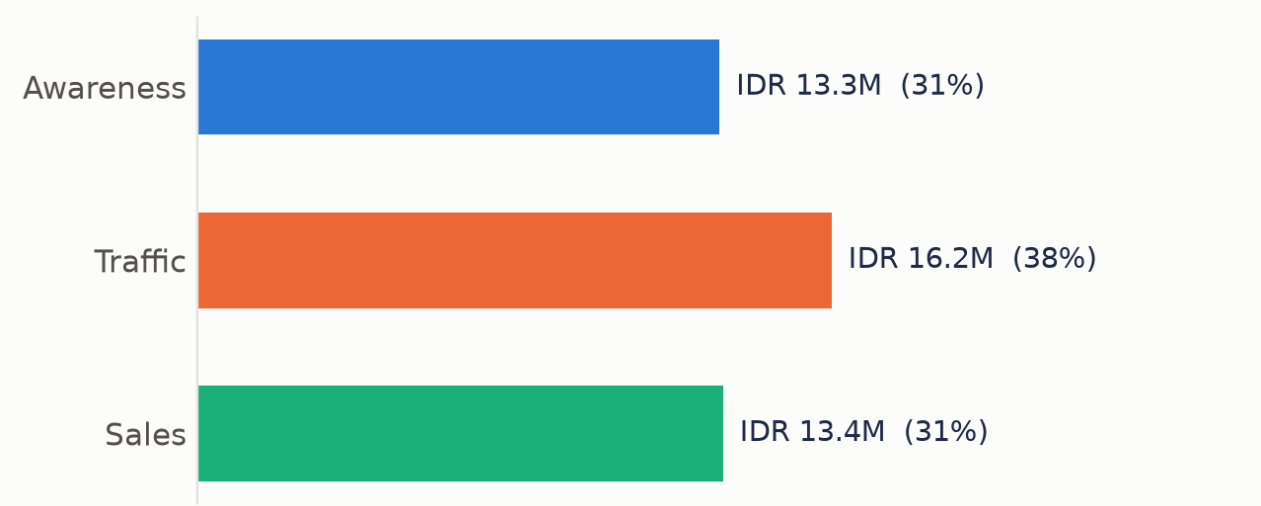

Recommended headline for the board: IDR 345,470 blended CAC, explained as IDR 110,651 to convert a buyer plus IDR 234,819 of brand and traffic investment per purchase. This keeps the number honest while showing that the acquisition engine itself is efficient.

One purchase is counted as one acquired client. Meta reports purchase events, not unique customers, so a repeat buyer inside the period counts twice and true CAC is slightly higher than shown. Attribution window is 7-day click or 1-day view.

QUESTION 1

Where the website budget went

Total website promotion spend was **IDR 42,838,221**, an average of IDR 639,376 per day of delivery. Traffic campaigns were the largest single line, followed by Sales and Awareness at almost equal weight.

Objective	Role in the funnel	Spend	Share	What it bought
Awareness	Build brand recall with cold audiences	IDR 13.3M	31%	10,468,919 people reached at IDR 1,259 CPM
Traffic	Bring shoppers to the website	IDR 16.2M	38%	118,907 landing page views at IDR 136 each
Sales	Convert shoppers into buyers	IDR 13.4M	31%	121 purchases worth IDR 22.7M, ROAS 1.70x
Total	All website promotion	IDR 42.8M	100%	124 purchases worth IDR 23.3M, ROAS 0.54x

Reading the table

- Awareness bought reach cheaply (IDR 1,259 per thousand impressions) but produced 0 attributed purchases. That is expected for the objective, not a failure.
- Traffic campaigns delivered 87% of all landing page views yet only 3 purchases. Visitors arrive but do not buy inside the attribution window.
- Sales campaigns took 31% of the budget and produced 98% of purchases. This is the engine that actually acquires clients.
- The Awareness figure includes an AON reach campaign that ran 1 to 12 July. If that campaign belongs to another budget line, total spend falls by IDR 3,417,371.

From reach to purchase

Across all campaigns we reached **15,824,357** people. Of those, 135,976 viewed a landing page, 1,837 added a product to cart and 124 purchased.

Funnel stage	Count	Step rate	Cost per event (all spend)
People reached	15,824,357		IDR 2.71
Landing page views	135,976	0.86% of previous step	IDR 315
Adds to cart	1,837	1.4% of previous step	IDR 23,320
Purchases	124	6.8% of previous step	IDR 345,470

6.8%

Cart to purchase rate

IDR 284.6M

Cart value that did not convert

IDR 23,320

Cost per add to cart (all spend)

IDR 345,470

Cost per purchase (all spend)

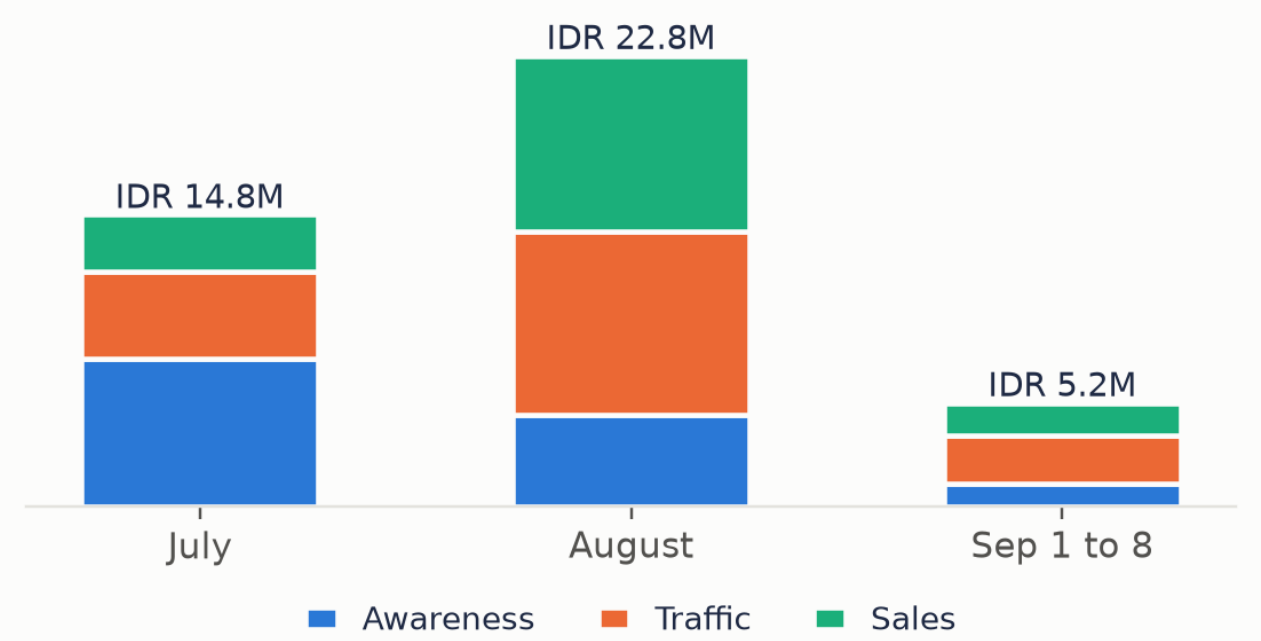

Checkout is the weakest step. Shoppers placed IDR 307.8M of products into carts and IDR 23.3M was purchased. Even allowing for duplicate cart events, more than 90% of cart value walks away. A checkout fix, an abandoned cart reminder, or a first order incentive would raise purchases without raising media spend.

Cart value counts every add to cart event, so a shopper who adds twice is counted twice. Treat the gap as a direction, not an exact leak.

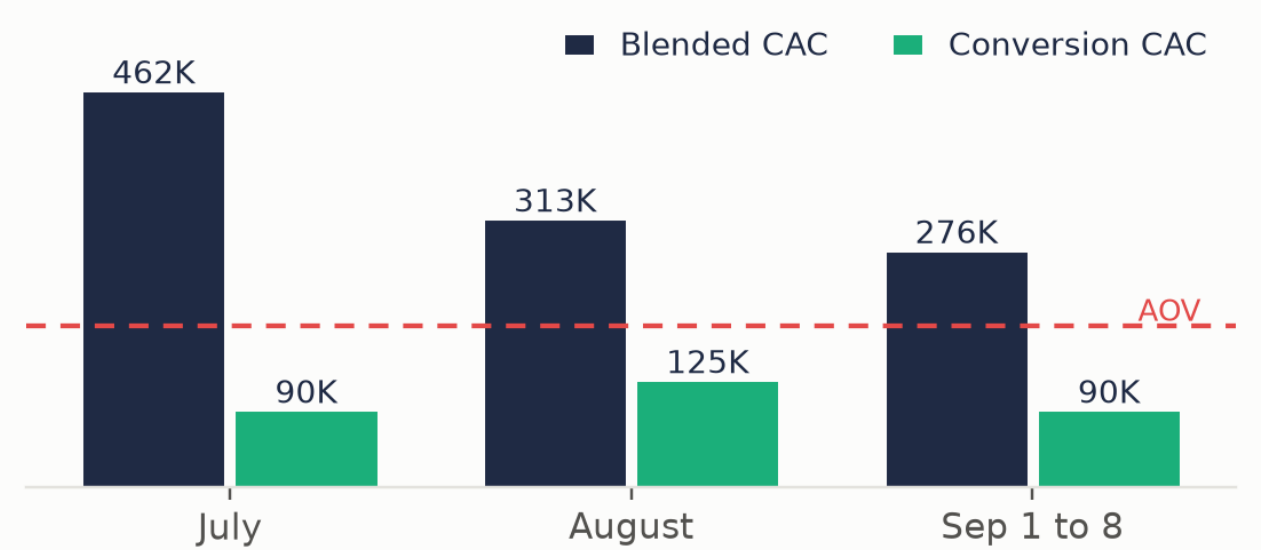

Spend and efficiency by month

July includes the AON reach campaign and only two weeks of the Sales campaign, which started on 17 July. August is the first full month of the complete funnel. September covers 1 to 8 September only.

Monthly spend by objective

Cost to acquire one client by month

Month	Total spend	Purchases	Revenue	Blended CAC	Conversion CAC
July	IDR 14.8M	32	IDR 6.1M	IDR 461,699	IDR 90,254
August	IDR 22.8M	73	IDR 13.9M	IDR 312,607	IDR 125,005
Sep 1 to 8	IDR 5.2M	19	IDR 3.2M	IDR 275,975	IDR 90,293
Total	IDR 42.8M	124	IDR 23.3M	IDR 345,470	IDR 110,651

Blended CAC improved by 40% from July to early September. Conversion CAC rose in August when the Retargeting campaign ran (IDR 2,722,540 for 5 purchases) and fell again once it was paused on 18 August.

What each campaign delivered

Each campaign is judged on the metric it was built for. CAC and ROAS are shown only where purchases are the objective.

Campaign	Spend	Primary result	Purch.	CAC	ROAS
Awareness, Sophie Martin (16 Jul to 8 Sep)	IDR 9.9M	7,637,296 reached, CPM IDR 1,284	0	n/a	n/a
Awareness, AON (1 to 12 Jul)	IDR 3.4M	2,831,623 reached, CPM IDR 1,193	0	n/a	n/a
Traffic, LPV (17 Jul to 8 Sep)	IDR 16.2M	118,907 landing page views at IDR 136 each	3	n/a	n/a
Sales, Cold Start Broad (17 Jul to 8 Sep)	IDR 10.7M	116 purchases, IDR 21.8M revenue	116	IDR 91,950	2.04x
Sales, Retargeting (31 Jul to 18 Aug)	IDR 2.7M	5 purchases, IDR 1.0M revenue	5	IDR 544,508	0.36x

Ad set highlights

- **Cold Start Broad (Advantage+, women 18 to 45)** is the only ad set with a healthy return: 116 purchases at IDR 91,950 each and a 2.04x ROAS. It deserves more budget.
- **CL-1 Online Shopper Behaviour** is the single largest line at IDR 12.3M, 29% of all spend. It delivered 88,075 landing page views but only 2 purchases and 253 adds to cart.
- **RT-2 Product Viewers 30 to 180 days** spent IDR 2.0M for 1 purchase. The 30 to 180 day window is too wide and too cold for a purchase objective.
- **RT-1 Cart and Checkout 14 days** is the right idea with too little audience: IDR 394,367 spent, 2 purchases, ROAS 0.98x. It needs a larger pool of cart abandoners to work, which the checkout fix would provide.

Four things leadership should know

1. **We are paying more to acquire a customer than that customer spends.** Blended CAC is IDR 345,470 against an average order of IDR 187,712. Even the Sales campaigns on their own spend 59% of the first order value to win it. Whether this is a good investment depends on gross margin and repeat purchase rate, neither of which is in the ads data. We need those two numbers to say whether the website is profitable per customer.
2. **Sixty nine percent of spend is not producing purchases inside the attribution window.** Awareness and Traffic together cost IDR 29.4M and are credited with 3 purchases. Some of their value shows up later as cheaper conversions in the Sales campaign, but we cannot prove that from this export alone.
3. **The retargeting experiment did not work in its current form.** IDR 2.7M produced 5 purchases at IDR 544,508 each, a 0.36x ROAS. It was paused on 18 August, which was the right call.
4. **Meta attribution understates the true result.** Purchases that came through organic search, direct visits or a later device are not in these numbers. The real blended CAC is probably lower than IDR 345,470. Comparing Meta purchases with total website orders from the store back end would close this gap.

Bottom line. The acquisition engine works and is improving. The surrounding budget is buying audience and visits that are not yet converting. The fastest gains are at checkout and in budget mix, not in more media.

What we propose to do next

- 1. **Shift budget toward the engine that converts.** Move part of the Traffic budget into the Cold Start Broad Sales campaign in steps of 20% per week while CAC stays below IDR 120,000. Target: Sales share of spend from 31% to 50% by end of October.
- 2. **Fix checkout before buying more visits.** Review the cart and checkout flow on mobile, add an abandoned cart reminder by WhatsApp or email, and test a first order voucher. Raising the cart to purchase rate from 6.8% to 10% would add roughly 60 purchases on the same spend.
- 3. **Rebuild retargeting with hot audiences only.** Restart with cart and checkout abandoners from the last 7 to 14 days and product viewers from the last 30 days. Keep the 30 to 180 day pool out of purchase campaigns.
- 4. **Cut the Traffic ad set that does not convert.** CL-1 Online Shopper Behaviour is 29% of all spend with 2 purchases. Cap it, shift the remainder to CL-3 Lookalike of web visitors, which has the cheapest landing page view at IDR 122.
- 5. **Report CAC two ways every month.** Blended CAC for the board and Conversion CAC for the marketing team. Add gross margin and 90 day repeat rate from the store back end so CAC can be compared with customer lifetime value.
- 6. **Confirm two data questions.** Whether the AON reach campaign belongs to the website budget, and how many total website orders the store recorded in the period, so Meta attributed purchases can be compared with reality.

Expected impact if the first two actions land

IDR 345,470 Blended CAC today	Under IDR 250,000 Blended CAC target, end of Q4
0.54x Blended ROAS today	0.9x to 1.0x Blended ROAS target, end of Q4

Targets are estimates based on the current Sales campaign CAC and a 10% cart to purchase rate. They assume the same total budget and no change in average order value.

How the numbers were built

Item	Definition used in this report
Data source	Meta Ads Manager export, Sales-Website Jul - Sep.xlsx, 458 ad set by day rows, 1 July to 8 September 2026.
Total website spend	Sum of Amount spent (IDR) across all five campaigns in the export.
Client acquired	One Website purchase event as reported by Meta. Not de-duplicated by customer.
Blended CAC	Total spend divided by total website purchases.
Conversion CAC	Spend of Sales objective campaigns divided by their purchases.
Best engine CAC	Spend of the Cold Start Broad campaign divided by its purchases.
ROAS	Website purchase conversion value divided by spend.
Average order value	Purchase conversion value divided by purchases.
Attribution	7-day click or 1-day view, as set in the ad account. View-through purchases are included.
Objective grouping	Taken from the campaign name prefix: Awareness, Traffic or Sales.
Currency and rounding	Indonesian Rupiah. Figures shown in millions are rounded to one decimal; CAC values are rounded to the nearest rupiah.

Known limitations

- Purchases outside the Meta attribution window, and purchases from organic or direct visits, are not counted. True CAC is likely lower.
- Repeat buyers inside the period count as more than one client. True CAC is slightly higher on that account.
- The AON reach campaign (1 to 12 July) is included in Awareness spend pending confirmation that it belongs to the website budget.
- September is a partial month (8 days) and should not be compared with July or August as a whole.
- The accompanying Excel workbook contains every figure in this report as live formulas over the raw export, so any correction to the data flows through automatically.
