

Website Advertising Performance

September 2026 monthly report

Reporting period: 1 to 30 September 2026

Compared with: 1 to 31 August 2026

Source: Meta Ads Manager, all website campaigns

Prepared for: CEO and leadership team

THE TWO ANSWERS

Question 1. Total spend to promote the website in September

IDR 15,875,154

-30% versus August (IDR 22.8M). 5,538,486 people reached, 73 website purchases.

Question 2. Cost to acquire one client (blended CAC)

IDR 217,468

-30% versus August (IDR 312,607). The Sales campaign alone acquires a client for IDR 88,773; see page 3.

How to read this report: page 2 gives the executive summary, page 3 explains the CAC lenses, pages 4 to 8 show where the money went, the funnel, the monthly and weekly trend and each campaign, pages 9 and 10 give the risks and the recommended next steps, page 11 lists the method and assumptions.

What leadership needs to know

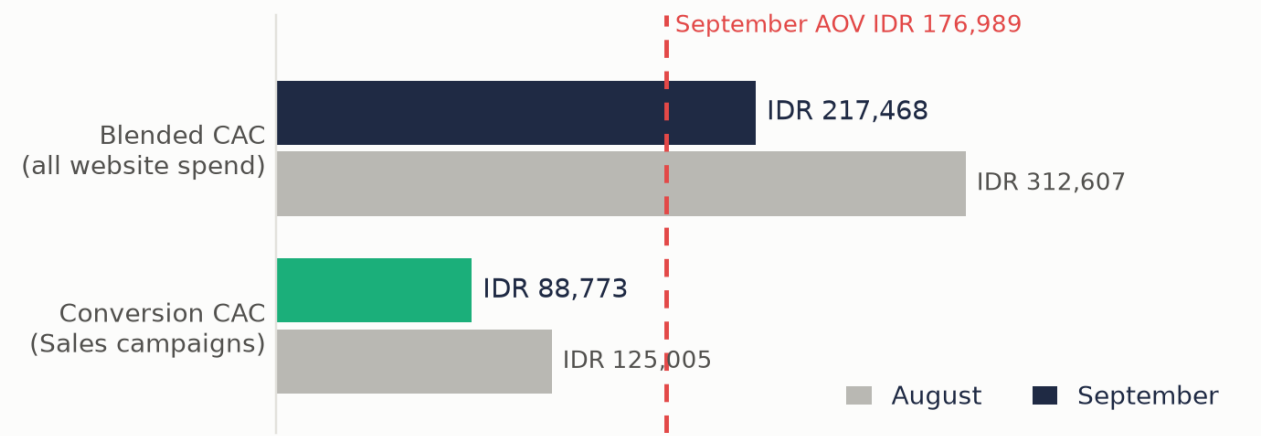

IDR 15.9M Total website spend (-30% vs Aug)	IDR 217,468 Blended CAC (-30% vs Aug)
IDR 88,773 Conversion CAC (-29% vs Aug)	IDR 176,989 Average order value (-7% vs Aug)
73 Website purchases (Aug: 73)	IDR 12.9M Attributed revenue (-7% vs Aug)
0.81x Blended ROAS (Aug: 0.61x)	2.01x Sales campaign ROAS (Aug: 1.52x)

Key messages

- **We spent IDR 15,875,154 on the website in September, 30% less than August.** Sales campaigns took 38% of the budget, the same share as August. The shift toward Sales that the last report asked for has not happened: all three layers were cut by similar amounts.
- **Blended CAC fell to IDR 217,468 from IDR 312,607.** Be clear with the board about why: purchases were flat at 73 while spend fell 30%. The gain came from cutting budget, not from winning more clients.
- **The acquisition engine is in good shape.** Cold Start Broad acquired 68 clients at IDR 88,773 each with a 2.01x ROAS, better than August on both counts.
- **Blended CAC is still above the average order value.** CAC is 123% of a IDR 176,989 order, down from 164% in August. First purchases are still acquired at a loss unless customers buy again. Average order value also slipped 7%.
- **Checkout improved slightly and is still the biggest leak.** Cart to purchase rate rose to 7.7% from 6.5%. IDR 133.1M of cart value did not convert.

CAC in September, two ways to read it

Awareness campaigns pay for reach, Traffic campaigns pay for website visits, and only the Sales campaign is optimised by Meta to find buyers. Dividing all spend by purchases is honest but punishes the first two layers for a job they were not given. Both lenses are correct; they answer different questions.

Lens	What it answers	Spend	Purch.	CAC Sep	CAC Aug
1. Blended CAC	What did every rupiah of website promotion cost per purchase?	IDR 15.9M	73	IDR 217,468	IDR 312,607
2. Conversion CAC	What did the campaign built to acquire buyers cost per purchase?	IDR 6.0M	68	IDR 88,773	IDR 125,005
Difference	Brand and traffic investment per purchase	IDR 9.8M		IDR 128,695	IDR 187,603

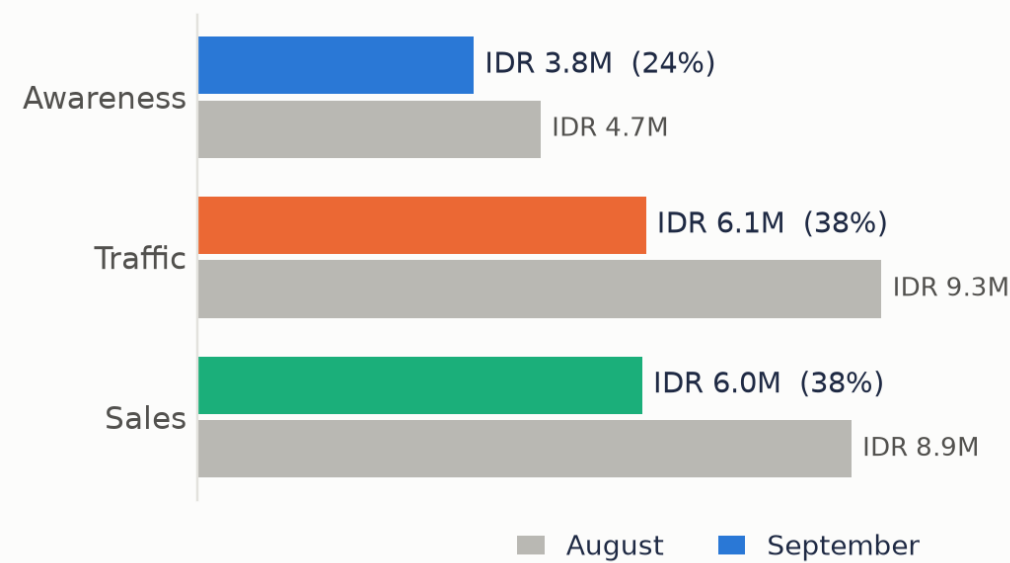

Recommended headline for the board: IDR 217,468 blended CAC, explained as IDR 88,773 to convert a buyer plus IDR 128,695 of brand and traffic investment per purchase. In August that investment layer was IDR 187,603 per purchase. It fell because Awareness and Traffic spend was cut, not because budget moved into Sales.

In the July to September report a third lens showed the best Sales campaign on its own. In September Cold Start Broad was the only Sales campaign, so lens 2 and lens 3 are the same number. August conversion CAC included the Retargeting campaign; Cold Start Broad alone was IDR 93,371 in August. One purchase is counted as one acquired client. Meta reports purchase events, not unique customers. Attribution window is 7-day click or 1-day view.

QUESTION 1

Where the September budget went

Total website promotion spend was **IDR 15,875,154**, an average of IDR 529,172 per day. Every objective was cut versus August, Traffic the most, so the Sales share of budget stayed at 38%. Within Sales, Cold Start Broad alone went from 27% of spend to 38% because Retargeting was dropped.

Objective	Spend Sep	vs Aug	Share	What it bought in September
Awareness	IDR 3.8M	-19%	24%	2,945,349 people reached at IDR 1,258 CPM
Traffic	IDR 6.1M	-34%	38%	43,492 landing page views at IDR 140 each, 5 purchases
Sales	IDR 6.0M	-32%	38%	68 purchases worth IDR 12.1M, ROAS 2.01x
Total	IDR 15.9M	-30%	100%	73 purchases worth IDR 12.9M, ROAS 0.81x

Reading the table

- Awareness reach cost IDR 1,258 per thousand impressions, in line with August. It produced 0 attributed purchases, which is expected for the objective.
- Traffic spend was cut by 34% and landing page views fell by 35%. Cost per landing page view stayed at about IDR 140. Traffic was credited with 5 purchases, up from 2.
- Sales spend was 32% lower than August because the Retargeting campaign (IDR 2.7M in August) no longer runs. Cold Start Broad itself was almost unchanged (IDR 6.2M to IDR 6.0M) and produced 68 purchases against 66.
- No AON campaign ran in September, so the question from the last report about whether it belongs to the website budget only affects the July figures.

From reach to purchase, September

We reached **5,538,486** people. Of those, 51,781 viewed a landing page, 947 added a product to cart and 73 purchased.

Funnel stage	Sep count	vs Aug	Step rate Sep	Step rate Aug	Cost per event
People reached	5,538,486	-14%			IDR 2.87
Landing page views	51,781	-34%	0.93%	1.2%	IDR 307
Adds to cart	947	-16%	1.8%	1.4%	IDR 16,764
Purchases	73	+0%	7.7%	6.5%	IDR 217,468

7.7%

Cart to purchase rate (Aug: 6.5%)

IDR 133.1M

Cart value not converted (Aug: IDR 174.0M)

IDR 16,764

Cost per add to cart (Aug: IDR 20,303)

IDR 307

Cost per landing page view (Aug: IDR 292)

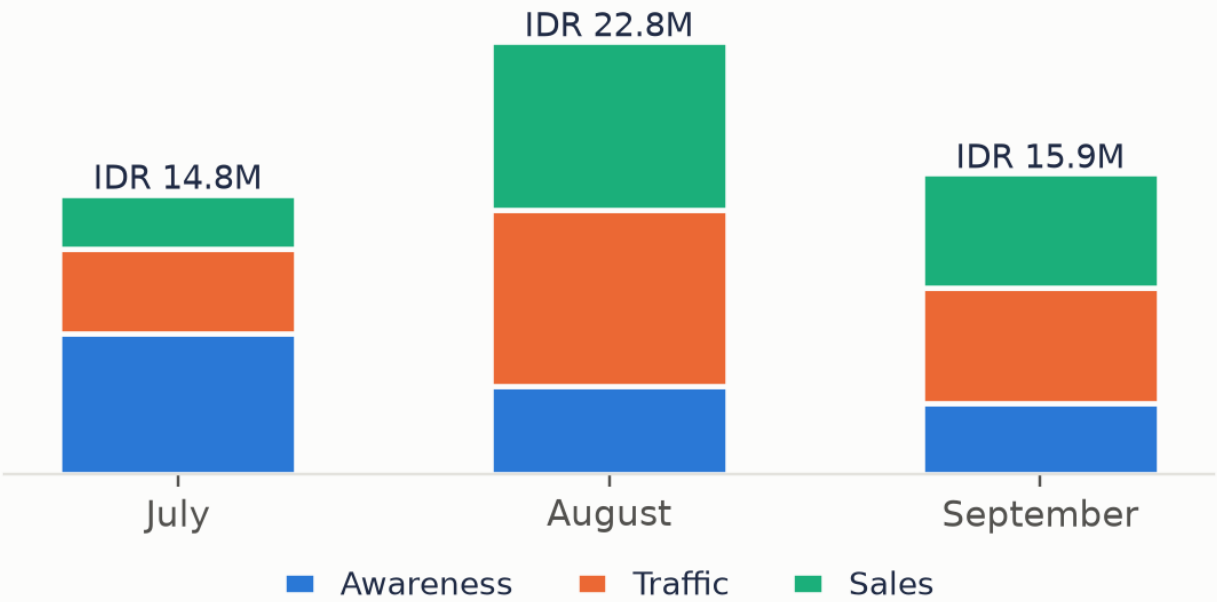

Checkout is still the weakest step. Shoppers placed IDR 146.0M of products into carts and IDR 12.9M was purchased, so 91% of cart value walked away. The cart to purchase rate improved by about one point in September, which is worth roughly 11 extra purchases, but the checkout fixes recommended in the last report have not been confirmed as live.

Cart value counts every add to cart event, so a shopper who adds twice is counted twice. Treat the gap as a direction, not an exact leak.

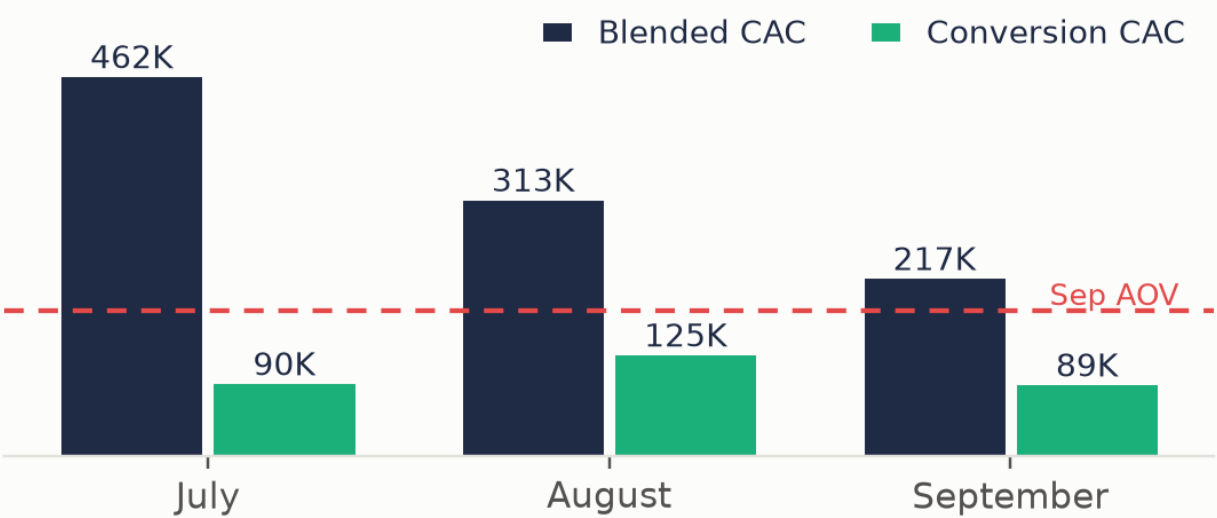

Three months side by side

July includes the AON reach campaign and only two weeks of the Sales campaign, which started on 17 July. August and September are full months with the complete funnel, so August is the fair comparison for September.

Monthly spend by objective

Cost to acquire one client by month

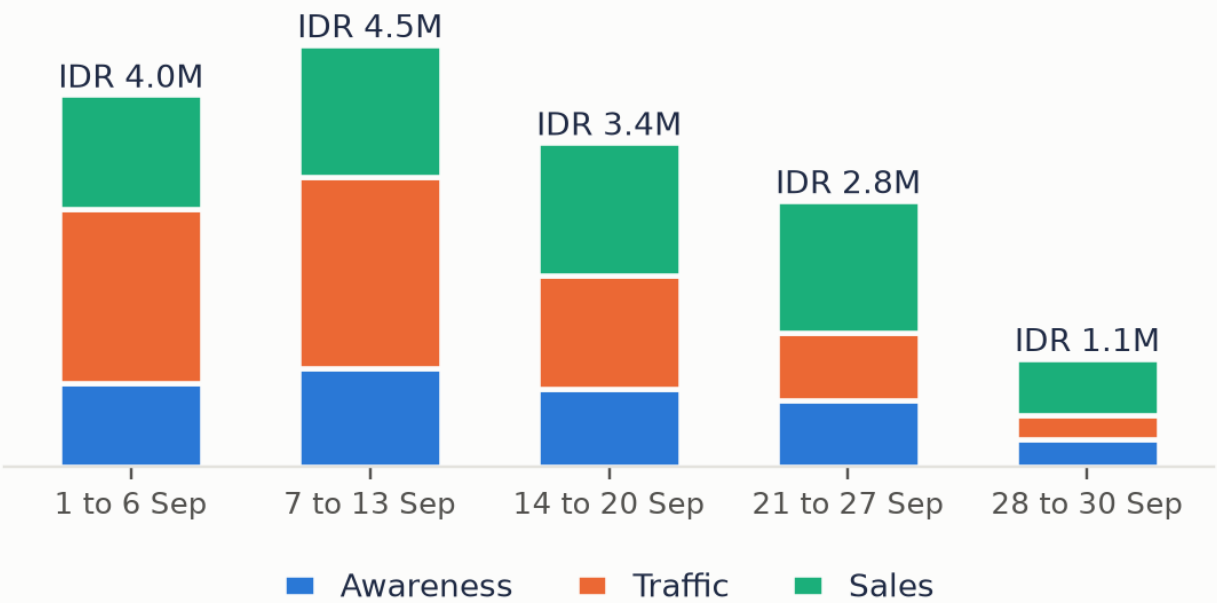

Month	Spend	Purch.	Revenue	Blended CAC	Conversion CAC	ROAS
July	IDR 14.8M	32	IDR 6.1M	IDR 461,699	IDR 90,254	0.42x
August	IDR 22.8M	73	IDR 13.9M	IDR 312,607	IDR 125,005	0.61x
September	IDR 15.9M	73	IDR 12.9M	IDR 217,468	IDR 88,773	0.81x

Blended CAC has fallen for three months in a row, from IDR 461,699 in July to IDR 217,468 in September. Purchases rose from July to August and then held flat. Revenue fell 7% in September because the same number of orders carried a lower average value.

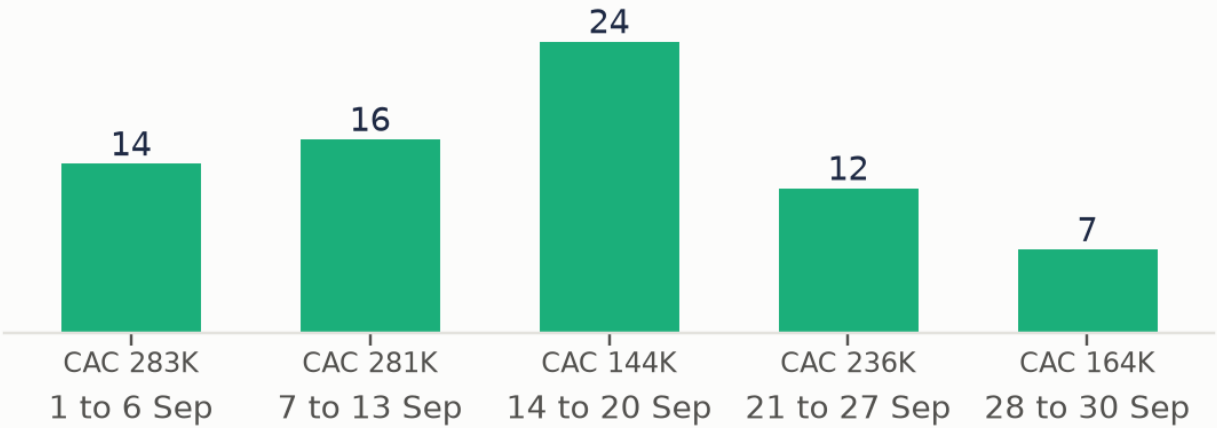

What happened inside September

Weeks start on Monday. The first week has six days and the last week has three. Spend was reduced through the month: the last full week cost less than half of the second week.

Weekly spend by objective

Weekly purchases and blended CAC

Week	Spend	Sales spend	Purch.	Blended CAC	Conversion CAC	ROAS
1 to 6 Sep	IDR 4.0M	IDR 1.2M	14	IDR 282,613	IDR 93,296	0.60x
7 to 13 Sep	IDR 4.5M	IDR 1.4M	16	IDR 280,597	IDR 87,702	0.60x
14 to 20 Sep	IDR 3.4M	IDR 1.4M	24	IDR 143,720	IDR 64,201	1.34x
21 to 27 Sep	IDR 2.8M	IDR 1.4M	12	IDR 235,824	IDR 140,218	0.79x
28 to 30 Sep	IDR 1.1M	IDR 0.6M	7	IDR 164,263	IDR 86,551	0.87x

14 to 20 Sep was the best week of the quarter: 24 purchases, blended CAC IDR 143,720, ROAS 1.34x. The following week Sales spend was unchanged but purchases fell to 12, while Traffic spend had been cut by 40% in that same week. One week is not proof, but it is a warning that Traffic may be feeding the Sales campaign more than the attribution numbers show. See page 9.

What each campaign delivered in September

Each campaign is judged on the metric it was built for. CAC and ROAS are shown only where purchases are the objective. August values are in brackets.

Campaign	Spend	Primary result (Aug)	Purch.	CAC (Aug)	ROAS (Aug)
Awareness, Sophie Martin	IDR 3.8M	2,945,349 reached (3,624,091), CPM IDR 1,258	0	n/a	n/a
Traffic, LPV	IDR 6.1M	43,492 LPV (67,225) at IDR 140 each	5	n/a	n/a
Sales, Cold Start Broad	IDR 6.0M	68 purchases (66), IDR 12.1M revenue	68	IDR 88,773 (IDR 93,371)	2.01x (2.04x)
Sales, Retargeting	Not running	Paused 18 August after IDR 2.7M for 5 purchases	0	n/a	n/a

Ad set highlights

- **Cold Start Broad (Advantage+, women 18 to 45)** did its job again: 68 purchases at IDR 88,773, ROAS 2.01x, cart to purchase rate 10.4%. It is the only ad set that returns more than it costs.
- **CL-1 Online Shopper Behaviour** is still the largest single line at IDR 4.9M, 31% of all spend (August IDR 7.2M). It delivered 34,708 landing page views and 5 purchases, up from 1.
- **CL-3 Lookalike of web visitors** was cut to IDR 1.0M and delivered 7,109 landing page views at IDR 139 each, the cheapest visit in the account, with 0 purchases.
- **Inside Awareness, budget moved from the broad cold audience to the fashion interest audience.** AW-1 Broad Cold went from IDR 3.6M to IDR 2.0M while AW-2 Fashion and Style rose from IDR 0.9M to IDR 1.5M. CPMs are within IDR 25 of each other, so the change is cost neutral. Whether the interest audience later converts better in the Sales campaign cannot be seen in this data.

Four things leadership should know

1. **Lower CAC came from spending less, not selling more.** Spend fell 30%, purchases stayed at 73, revenue fell 7%. The programme is cheaper per client but it is not growing. If the goal for Q4 is more clients, the Sales campaign needs more budget than the IDR 6.0M it received in both August and September.
2. **We still pay more to acquire a customer than that customer spends.** Blended CAC IDR 217,468 against an average order of IDR 176,989. The ratio improved from 1.64x to 1.23x, which is real progress, but without gross margin and repeat purchase data from the store back end we cannot say whether a client is profitable over time.
3. **Cutting Traffic may be cutting Sales.** In the week Traffic spend was reduced by 40%, Sales campaign purchases fell from 22 to 10 on the same Sales spend. Traffic campaigns fill the pixel with shoppers that the Sales campaign later converts, and the attribution window gives Traffic no credit for that. This is one week of data and could be noise. It needs a controlled test before more Traffic budget is removed.
4. **Meta attribution understates the true result.** Purchases through organic search, direct visits or a later device are not in these numbers, so real blended CAC is lower than IDR 217,468. Comparing Meta purchases (73) with total website orders from the store back end for September would close this gap and was requested in the last report.

Bottom line. September proved the acquisition engine is reliable at about IDR 90,000 per client. The open question is no longer whether it works, but how far it scales and how much supporting traffic it needs. Those are the two tests for October.

What we propose for October

Progress on the last report

Recommendation made in the Jul to Sep report	Status in September
Shift budget toward the Sales campaign, target 50% share	Not done. Sales share 39% to 38%. All layers were cut by similar amounts instead of moving budget into Sales.
Fix checkout, abandoned cart reminders, first order voucher	Not confirmed. Cart to purchase rate 6.5% to 7.7%, which may be noise.
Rebuild retargeting with hot audiences only	Not done. No retargeting ran in September.
Cap CL-1, shift to CL-3 lookalike	Opposite happened. CL-1 kept 31% of spend, CL-3 was cut to IDR 1.0M.
Report CAC two ways, add margin and repeat rate	CAC two ways is in place. Margin and repeat rate still missing.
Confirm AON ownership and total store orders	Open.

For October

- Grow the Sales campaign, do not just trim the rest.** Raise Cold Start Broad from IDR 6.0M to about IDR 9M in steps of 20% per week, holding while conversion CAC stays under IDR 110,000. Expected: 90 to 100 purchases in October at the same AOV.
- Test the Traffic question properly.** Keep Traffic at the September average for two weeks, then cut it by half for two weeks, with Sales spend fixed. If Sales purchases drop with it, Traffic is earning more than its attributed numbers and should be kept. If not, the saving goes to Sales.
- Restart retargeting with hot audiences only.** Cart and checkout abandoners from the last 7 to 14 days, budget capped at IDR 1M for the first month. September produced 947 add to cart events, enough to feed it.
- Confirm the checkout fixes are live.** Each extra point of cart to purchase rate is worth about 9 purchases a month at September volumes, with no extra media cost.
- Close the two data gaps before the October report.** Total store orders for September from the back end, and gross margin per order, so CAC can be compared with real contribution.

Targets for October

IDR 217,468 Blended CAC, September	About IDR 200,000 Blended CAC target, October
73 Purchases, September	90 or more Purchases target, October

Targets assume the Sales campaign scales at a conversion CAC of IDR 90,000 to 110,000 and that total spend rises to about IDR 18M. They are estimates, not commitments.

How the numbers were built

Item	Definition used in this report
Data source	Meta Ads Manager export Sales-Website.xlsx, 210 ad set by day rows, 1 to 30 September 2026. July and August come from the earlier export used in the Jul to Sep report.
Data check	The 1 to 8 September rows appear in both exports. Purchases and landing page views match exactly; spend differs by IDR 364 because of late reported spend. The September export is used.
Total website spend	Sum of Amount spent (IDR) across all campaigns in the month.
Client acquired	One Website purchase event as reported by Meta. Not de-duplicated by customer.
Blended CAC	Total spend divided by total website purchases.
Conversion CAC	Spend of Sales objective campaigns divided by their purchases.
ROAS	Website purchase conversion value divided by spend.
Average order value	Purchase conversion value divided by purchases.
Attribution	7-day click or 1-day view, as set in the ad account. View-through purchases are included.
Weeks	Monday to Sunday, cut at the month boundary. First week 1 to 6 September, last week 28 to 30 September.
Currency and rounding	Indonesian Rupiah. Figures in millions are rounded to one decimal; CAC values to the nearest rupiah.

Known limitations

- Purchases outside the Meta attribution window, and purchases from organic or direct visits, are not counted. True CAC is likely lower.
- Repeat buyers inside the period count as more than one client. True CAC is slightly higher on that account.
- The weekly Traffic observation on page 7 rests on one week and is flagged as a hypothesis to test, not a finding.
- The accompanying Excel workbook holds every figure as live formulas over the raw export. The report month is an input cell on the Executive Summary sheet, so October can be reported by appending the new rows and changing that cell.
